

June 2023

Obligation of information in accordance with the REACH regulation (EG Nr. 1907 / 2006)

Our company produces “goods”, i.e. Standard Parts, Workholding Systems, Hand Tools and Aviation Products). As a manufacturer according to REACH, we are so-called “downstream user”.

For our company, any duties resulting from the manufacture and placing on the market of substances / chemicals for the pre-registration and/or registration with ECHA do not apply. For this reason, our products cannot be defined as a substance and/or a preparation. In addition, no substance is released from our products under normal conditions and under conditions of use. As a result of this, we are neither subject to registration nor to the production of any safety data sheets.

We therefore have the obligation to inform our customers in accordance with REACH Article 33 provided that a substance of very high concern (SVHC) with a content of more than 0.1 % by mass is in one of our supplied products.

In the steel, aluminium and copper materials we use, you can partly find lead (CAS number 7439-92-1) used as an alloying element. As lead in its function as an alloying element is chemically bound, these products do not pose a danger under normal conditions of use.

On our website under the menu „Company“ / „Quality & Environment“ you can find an overview of all relevant articles as well as at article level in the tab “compliance”.

Should you have any further questions regarding the REACH implementation in our company, please do not hesitate to contact us.
